

JYOTHIRADITYA PAYAVULA

Backend Engineer - Java | Spring Boot | Microservices | Hyderabad, India | +91 96039 23594 | [Gmail](#) | [LinkedIn](#) | [Portfolio](#)

SUMMARY

Backend-focused Software Engineer with ~2 years of experience working with taxation applications built on microservice architecture. Hands-on in developing Spring Boot REST APIs, integrating asynchronous Kafka-based workflows, implementing Redis caching strategies, and handling high-volume data ingestion using asynchronous frontend batching and Spring Batch chunk processing.

EXPERIENCE

Tata Consultancy Services (TCS) System Engineer: <i>Government Taxation Platform (Ghana)</i>	Ahmedabad, India May 2024 - Present
- Developed and maintained responsive tax filing modules for a large-scale government taxation system supporting complex tax filing and validation workflows - Implemented REST APIs for transactional and master-data operations using PostgreSQL and MongoDB - Integrated service-layer logic with existing Kafka producers and consumers to support asynchronous processing and non-blocking workflow execution - Utilized Redis caching annotations for read-heavy service methods, improving average API response times by ~30–40% - Worked within a secured API ecosystem using JWT-based authentication and Keycloak-managed authorization, ensuring role-based access control - Consumed APIs routed through Kong API Gateway, adhering to centralized routing, authentication, and security policies - Designed and implemented a high-volume CSV upload feature on the frontend using asynchronous batching with PapaParse, enabling parsing of ~1 million rows within ~4–5 seconds - Configured and worked with Spring Batch chunk-based processing for large-scale data ingestion, efficiently persisting high-volume transactional records while minimizing memory usage	

SKILLS AND CERTIFICATIONS

Backend & Frameworks: Java, Spring Boot, Spring Security, REST API Design, JPA/Hibernate
Distributed Systems & Messaging: Kafka (producer/consumer integration), Redis (service-layer caching)
Databases: MongoDB, PostgreSQL
Security: JWT, OAuth2, Keycloak (integration & token-based security)
Frontend: Angular, Reactive Forms, RxJS
Tools & Platforms: Maven, Git, Postman
Certifications: AWS Cloud Practitioner

EDUCATION

Jawaharlal Nehru Technological University (JNTUH) Bachelor of Technology (B.Tech), Electronics and Communications Engineering: 7.89/10.0	Hyderabad, India August 2019-July 2023
Sri Chaitanya Junior College High School (MPC): 93/100	Hyderabad, India June 2017-March 2019

ACADEMIC PROJECTS

Operon: Multi-Tenant Secure SaaS Backend - Designed and developed a multi-tenant backend system supporting multiple organizations with strict data isolation - Enforced role-based access control (RBAC) at API level, ensuring secure access enforcement with negligible overhead (~<5ms per request) - Implemented Redis caching for session and authorization data, reducing repeated database access for authentication checks by ~40–60% - Optimized read-heavy endpoints using caching and efficient query patterns, improving average API response times by ~25–35%	(<i>Spring Boot, PostgreSQL, JWT, Redis</i>)
EcomEdge: An E-commerce App - Designed a modular E-commerce frontend using Angular, implementing reactive state management and lazy-loading to optimize performance and reduce development overhead by 20% - Engineered a microservices-based backend using Spring Boot and Spring Cloud, utilizing a centralized API Gateway and Service Discovery to improve system scalability and response times by 30%
